

INITIAL DIAGNOSTIC: AI MODEL VOLATILITY DETECTED. SYSTEM DESIGN MUST ADAPT.

WHAT ALREADY EXISTS (SDLC + PAPERCLIP) — AND THE HONEST CATCH

SDLC: 13 LIVE PIPELINE AGENTS

PAPERCLIP: TASK ORCHESTRATION

THE BUILD: A SWAPPABLE ROUTER

Nobody has actually solved this cleanly yet. The router is the missing piece.

ALIGNMENT TOLERANCE: $\pm 0.5\text{mm}$
MAX POWER: 150W

PROPOSED ARCHITECTURE: MODULAR ROUTING MANIFOLD. STATUS: IN DEVELOPMENT.

THE FILES: MEMORY THAT OUTLIVES THE MODEL

DATA PERSISTENCE LAYER: WIKI METHOD PROTOCOL. FORMAT: RAW MARKDOWN.

REACHABLE FROM WHERE YOU ALREADY WORK

PRIMARY INTERFACE NODE. ENVIRONMENT MATCH VERIFIED.

WHAT WE'RE NOT REBUILDING

These are "nice if we get to it,"
not part of the core demo.
Do not reinvent the wheel.

**PAPERCLIP: TASK SCHEDULING
(EXISTING)**

**JIRA: TICKET MANAGEMENT
(EXISTING SDLC PATTERN)**

EXCLUDED FROM CURRENT SCOPE. EXISTING MODULES SUFFICIENT.

THE CLOSE

The bet: build the router.
The files were never the hard part.

TARGET LOCK ACQUIRED

HACKATHON T-MINUS: 00:00

EXECUTION PROTOCOL: INITIATE BUILD.
